Install

1. log in into the backoffice and go to modules, then install the plugin like any other one from prestashop:

The screenshot shows the PrestaShop backoffice interface. The top navigation bar includes the 'Datepicker' logo, notification icons (5, 3, 10), a search bar, and a 'Quick Access' dropdown. The main navigation menu contains: Catalog, Orders, Customers, Price Rules, Shipping, Localization, Modules (highlighted), Preferences, Advanced Parameters, Administration, and Stats. The 'Module : List of modules' section header is visible. In the top right of this section, the 'Add a new module' button (represented by a puzzle piece icon) is circled in orange, along with a 'Help' button. Below the header, there is a search bar and several filter dropdowns: 'Sort by: All Modules', 'Installed & Not Installed', 'Enabled & Disabled', and 'All countries'. 'Reset' and 'Filter' buttons are also present. A message states 'No modules available in this section.' At the bottom left, a 'Categories' table is shown:

| Categories | |
|----------------|-----|
| Favorites | 0 |
| Total | 131 |
| Administration | 42 |

At the bottom right, there are buttons for 'Normal view' and 'Favorites view'.
