

Installing theme using Theme Installer module

STEP1:

Go to **Modules > Modules**

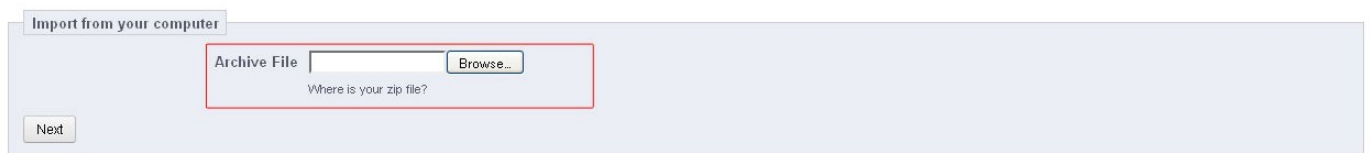

Click on **Administration** tab and install the module **Import/export a theme**.

After installing this module,click on **Configure**.

STEP2:

Here you will see "Import from your computer" where you need to select ZIP file which you have downloaded(**PRS0X00XX_Installer**) and click on "Next" button.

STEP 3:

Click on "Next" button.

STEP 4:

Here you will see "**Select the theme's modules you wish to install**". Select all the checkboxes so that all the modules are installed which are included with the theme.

Now under "**Native modules configuration**", if you want to see the template same as demo store then you need to select "**Theme's configuration**" and if you want to keep your current configuration then select "**Current configuration**".

Native modules configuration

☐ Current configuration

☒ Theme's configuration

☐ Both

Previous

Next
